RE: Premium Select Additive Packages

Gentlemen –

Diesel Fuel Doctor is a fuel maintenance company that provides innovative products and services to large and small users of diesel fuel to reduce downtime, fuel related maintenance costs, fuel consumption, and emissions. Roughly 165,000,000 million gallons of fuel pass through our equipment every year. We have offices throughout the United States and one in Australia.

We operate in the emergency power generation, commercial trucking, maritime, mining, rail, agricultural, yacht, and RV industries. We've been in business for 12 years and are OEM service providers to many CAT, Cummins, Detroit Diesel/MTU and Generac distributors.

Diesel Fuel Doctor became aware of Primrose Oil in April of 2014 and began experimenting with the Premium Select Additives at that time. We “bench tested” several additives for several months – using them on samples of the worst combinations of things that had come out of tanks and ended up in our shop for review. We then used the additives in a variety of environments in different parts of the country to see how “winter additives” and “summer additives” worked. This process took over 18 months to implement and review the results.

Since the winter of 2016/2017, Diesel Fuel Doctor has exclusively used Primrose Oil's Premium Select Additive packages and MP-8 microbiocide. Independent laboratory testing has shown that our service – including the use of the Primrose products – has brought fuel back to ASTM D975 specification and has notably reduced particle size in ISO cleanliness counts.

Our customers report a reduction in filter consumption and engine repair costs (fuel injector and fuel pump replacement). Regen times and overall occurrences are reduced in mobile equipment and unscheduled maintenance has all but been eliminated. (Certainly, there are other things that can, and do, happen to an engine...)

NO DRAMA! And, that's a good thing!

Regards,
