Gentlemen

I am writing to let you know how the Primrose Oil Products have increased my profit and cut my expenses. They have also increased the life of my truck and all other vehicles I own.

The first product I used was the #4033. It increased my power and fuel mileage. It was easy to get an accurate record since I always run the same load on the same route from Kearney, Neb. To Windsor Ont. And the first 4 months I saved \$580.00 in fuel compared to the same 4 months the year before. Before I used the #4033 I always had to shift on 3 hills in Iowa, but now I go over them 60 M.P.H. and I don't have to buy any #1 diesel in the winter because #4033 makes #2 diesel burn down to 28 degree below 0

I started using the #327 all purpose grease which is the best I have ever used. It stays on the 5th wheel and chassis twice as long as any other lubricants. This really sold me on Primrose Oil Products so I started using #480-M oil additives in my engine, and put #513-M gear lube in the transmission and rear ends.

These lubricants are all mfg. Approved and tested they cut the friction and lower the cost of operation. I have increased my fuel mileage approximately 15% since using Primrose products in the engine, transmission, and rear ends, the engine temperature has remained about 185 degree range the transmission, rear end have dropped to the 175 degree range.

Thanks for a superior product.
