

To whom it may concern;

Wise Forklift has been using the Diesel additive 5007 Power Klenz for about a year now and it has saved us over \$6000.00 in fuel filter replacement. We are able to triple our lift hours before changing the fuel filters now using this product in addition to other cost savings.

We have also been using the grease part # 327 Armor Plate for the same period and have found it to be far more superior than any product on the market. It does not run off like most grease we used in our applications.

Both of these products have reduced our downtime and expense

I recommend both of these products.
